Summary Findings

- Most pretrial detainees' controlling offense is a felony.
 - For about 40% of pretrial detainees, the open DOC data does not clearly specify the type-class of the controlling offense (M-NA, F-NA, NA).
- Despite making up around 10% of the Connecticut population, blacks make up ~41% of the pretrial population.
 - Males make up ~89% of the pretrial population.
- Unsurprisingly, length of pretrial detention increases as bond amount and charge severity increase.
 - Of those detained on November 4th, 2025, M-A defendants were detained for a median of ~45 days and their stay in detention ranged from ~1- 200 days, excluding outliers.
 - For those detained on November 4th, 2025, with a bond less than \$10k, the median days detained was 26, ranging from 1-620 days (M= 46.1 days, SD = 65.5)
- According to the data, at most 52.5% of individuals whose bond is below \$5K have a felony controlling offense. On the other end of the spectrum, at least 6% of individuals whose bond is above \$500K have a misdemeanor controlling offense.
- The most common offense for M-A defendants was failure to appear 2nd, the most common offense for F-D was violation of conditional discharge.
